

PROCEDURE

1. Dissolve VI-FINI in water 15 - 20 °C, in the 1:10 ratio;
2. Stir well for about 20 minutes in order to avoid lump formation;
3. Add to the volume of wine to be treated, ensuring a good homogenization;
4. Extend homogenization in the wine for at least 30 minutes to ensure contact of the clarifier with the whole volume of wine;
5. Leave to rest for sedimentation;
6. After 48 hours, transfer or filter.

Recommended dosage

5 - 40 g/hL
